& TROPICAL  
MEDICINE

# Armed conflict and health

Imperial College, London

Dr. Bayard Roberts

London School of Hygiene and Tropical Medicine

28 January 2013

## Learning outcomes

1. Have background knowledge on armed conflict.
2. Be able to describe key health impacts and pathways.
3. Engaged in key issues in the health-sector response, particularly the role of good information.

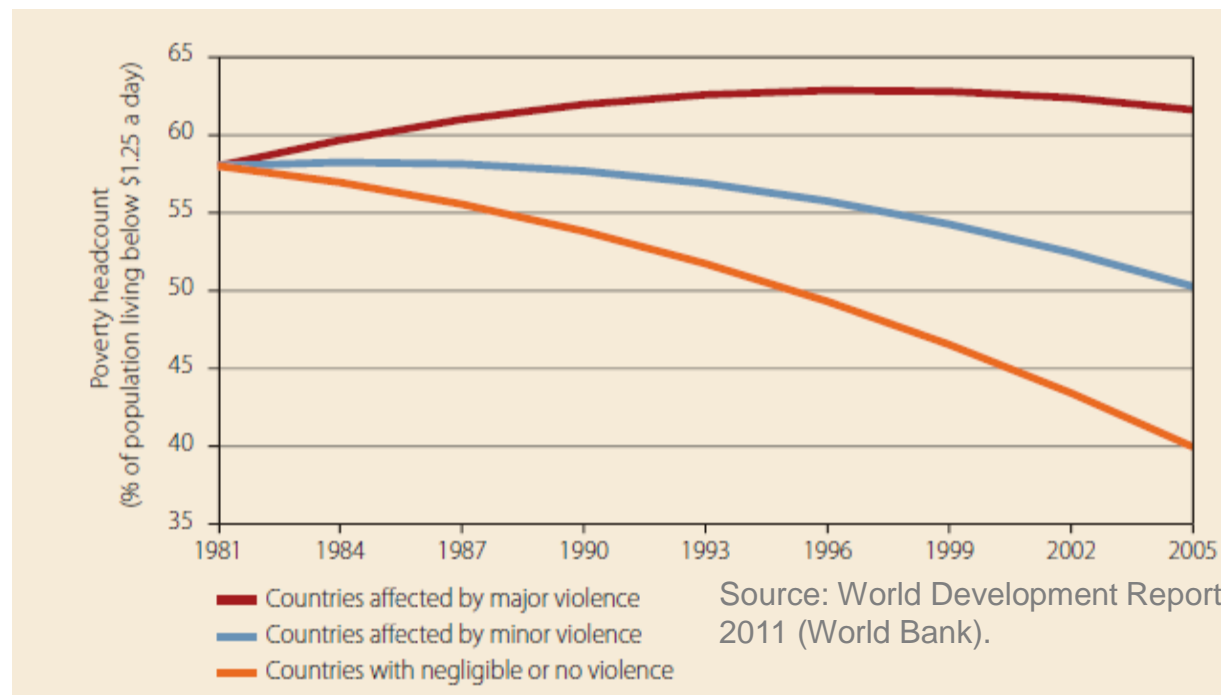

# 1. Background

# Why bother?

1. Humanitarian impulse
2. Civilians bearing the brunt of conflict
3. Major contributor to burden of disease
4. Technically easy and high impact interventions
5. Prevents long-term improvement in population health
6. Legal obligations
7. Halts development
8. Inequitable aid
9. Strategic: spill over, migration, loss of markets/resources etc

## 2. Health Impacts and Pathways

What do you think is the most important health indicator in a humanitarian crisis?

# Mortality

- Mortality rates measured in emergency settings as the number of deaths per 10,000 persons per day
- Sphere guidelines: emergency threshold – crude mortality rate (CMR) and under 5 mortality (U5MR) doubling of ‘norm’ (context specific)

Humanitarian Practice Network

# HPN

Managed by

Humanitarian Policy Group

## In brief

- Mortality data, properly collected, interpreted and used, have much to contribute to the appropriateness and effectiveness of humanitarian action in emergencies, and to advocacy on behalf of populations in crises. Most actors involved in relief will one day be confronted by such data, but the different ways in which this information can be collected, and their potential pitfalls, are not yet common knowledge among non-epidemiologists.

- This Network Paper describes the practice and purpose of that branch of epidemiology concerned with population mortality. It sets out the key indicators used to express mortality data, different options for how to measure mortality rates and suggestions for how to assess, interpret and use mortality reports. The paper also discusses the politics of mortality figures.

- The paper's aim is to enable readers to critically interpret mortality study reports, and to understand how these are used (or misused) to formulate policy. The intended audience is therefore all humanitarian actors, policy-makers, the media and members of affected communities, who may be called upon to comment on or make use of mortality studies, regardless of their technical background.

## About HPN

The Humanitarian Practice Network at the Overseas Development Institute is an independent forum where field workers, managers and policymakers in the humanitarian sector share information, analysis and experience. *The views and opinions expressed in HPN's publications do not necessarily state or reflect those of the Humanitarian Policy Group or the Overseas Development Institute.*

Britain's leading independent  
think-tank on international development  
and humanitarian issues

Source: WHO, Country Health Profiles.

# Pathways

## Underlying factors

- Poverty, structural barriers to development and wellbeing
- Epidemiological conditions and demographic profile
- Vaccination coverage
- Access to health services and strength of the health system
- Nutrition levels and food security

## Characteristics of conflict

- Intensity, duration, type of war

## Impact of conflict

- Reduced access to health services/delayed treatment
- Disrupted vaccination and disease control programmes
- Damage to broader health system
- Less agriculture, food supply, and nutritional intake
- Poor water, sanitation and hygiene conditions
- Inadequate shelter, overcrowding
- Environmental decay
- Population displacement
- Exposure to violence and traumatic events
- Poverty

## Direct health effects

- Injuries
- Worse mental health
- Mortality

## Indirect health effects

- Infectious disease
- Malnutrition
- Poor reproductive health
- Worse mental health
- Worse NCDs
- Mortality

# 3. The Response

# Guidelines

Eg. Sphere, IASC guidelines, Cluster Guidelines, individual agency guidelines (Red Cross movement, MSF etc)

# Key health interventions

- Adequate and appropriately spaced shelter
- Sufficient and safe food
- Sufficient and safe water
- Adequate sanitation facilities
- Mass vaccination (especially measles)
- Access to primary health care and referral hospitals
- Disease surveillance, outbreak preparedness and control, vector control.
- Health education and social mobilisation
- Reproductive health (MISP)
- Mental & psycho-social health

# Criteria for selecting interventions

- Potential to address main health problems
- Feasibility
- Maximum opportunity benefit
- Minimum opportunity cost
- Maximum effectiveness/cost-effectiveness
- Timeliness

Maximising impact - coverage and effectiveness

Number 61  
December 2007

## Network Paper

### Public health in crisis-affected populations

A practical guide for decision-makers

Commissioned and published by the Humanitarian Practice Network at ODI

Francesco Checchi, Michelle Gayer, Rebecca Freeman Grais and Edward J. Mills

**HPN**  
Managed by  
Humanitarian Policy Group

**In brief**

- Never before has it been clearer what interventions must be implemented to mitigate the adverse health consequences of wars and natural disasters, and what standards those interventions must strive to achieve; similarly, the range of interventions at our disposal has never been greater.
- Despite these advances, reviews of the global relief system suggest an ongoing failure to deliver. They also highlight the dire lack of credible data to help us understand just how much populations in crisis suffer, and to what extent relief operations are able to relieve that suffering.
- Political considerations often obstruct the delivery of appropriate relief. The premise of this paper, however, is that lack of knowledge is also an important limiting factor. This paper argues the need for advocacy for timely and appropriate relief, grounded in clearly outlined, scientifically sound reasoning, focusing discussion on substantive matters and reducing the scope for political manipulation. As such, the paper aims to enable readers to better face up to the political and bureaucratic aspects of the global relief system.

# Information – why?

## **Benchmark the severity of the crisis**

- Population mortality rate
- Prevalence of acute malnutrition

## **Orient public health priorities**

- Establish main epidemiological risk factors
- Detect and respond to unusual events (epidemics)

## **Advocate for humanitarian and political intervention**

- Witnessing and documentation

## **Monitor and evaluate relief interventions**

- Coverage of interventions (e.g. vaccination, water and sanitation)
- Impact of entire relief operation (decline in mortality?)

## Information needs

- Demographic profiles
- Size of affected population
- Epidemiological profiles
- Vaccination coverage
- Risk profiles (prox., intermediate, distal)
- Existing disease control programmes
- Existing vaccination services
- Existing health facilities/services
- Stakeholders
- Malnutrition rates
- Morbidity data
- Mortality data (various)
- Disease prevalence/incidence
- Programme/project performance (Efficiency, Effectiveness, Equality/Equity, Accessibility, Appropriateness, Acceptability)

## Information sources

- Existing data (e.g. population and epidemiological data).
- Routine service data.
- Rapid assessments (observations, clinic data, grave counts, community meetings, satellites images etc).
- Participatory methods with community members.
- Coverage mapping (e.g. health facilities).
- Surveillance: births and deaths, disease outbreaks, health worker/facility records.
- Sample surveys: e.g. Mortality, malnutrition, mental health etc
- Population estimation methods

# HIV/AIDS

“Armed conflicts and natural disasters also exacerbate the spread of the epidemic”

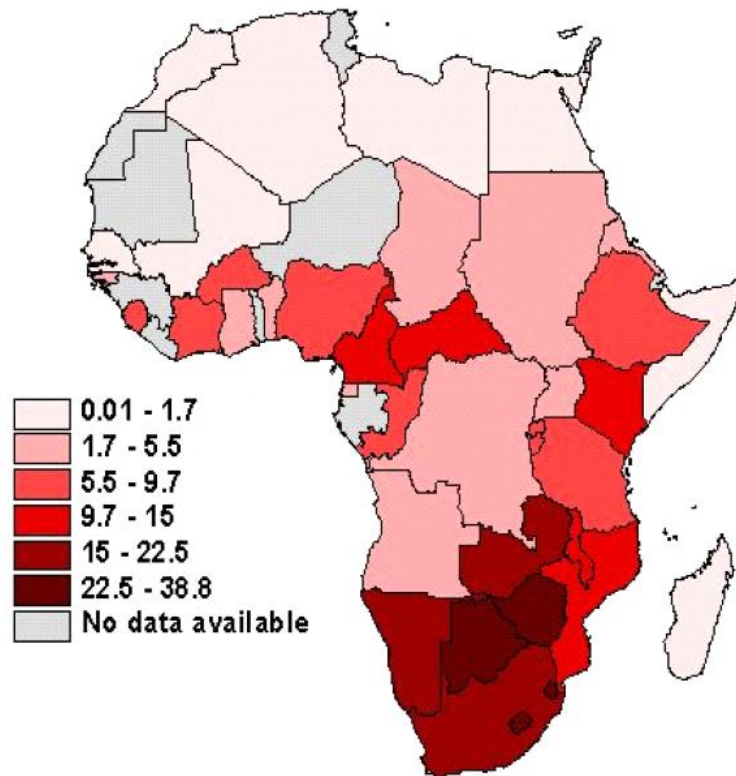

- The 2001 UN General Assembly Special Session on HIV/AIDS (UNGASS)

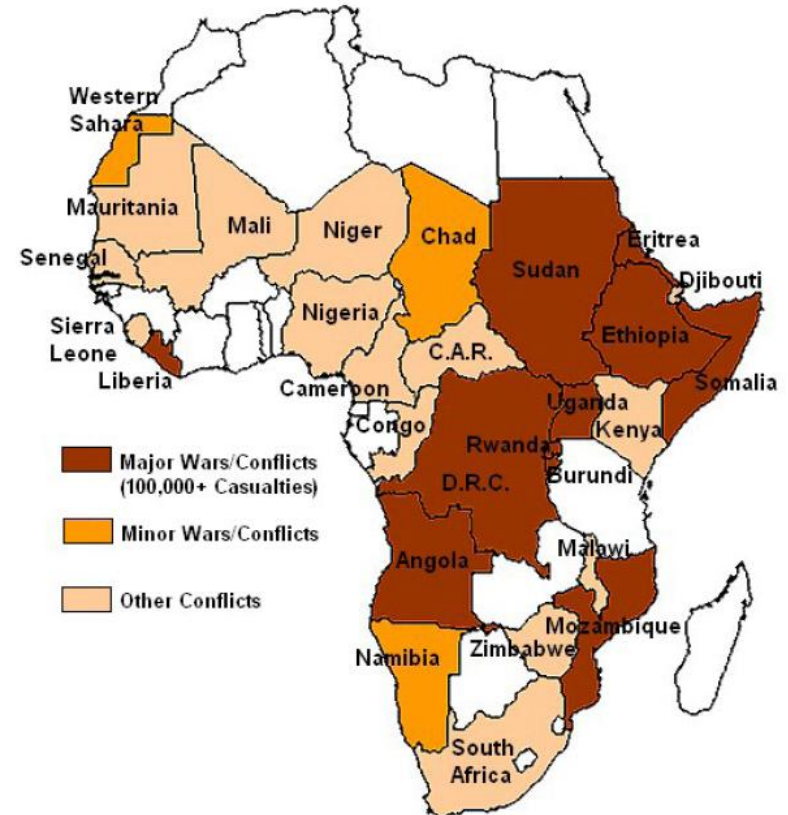

# Distribution of HIV prevalence and conflicts in Africa

HIV Prevalence in Africa, end 2001

Prevalence and Magnitude of Conflicts in Africa

**Source:** Mock et al. Emerging Themes in Epidemiology 2004 1:6

**See also:** Spiegel, P. et al. B. Prevalence of HIV infection in conflict-affected and displaced people in seven sub-Saharan African countries: a systematic review. Lancet, 369(9580): 2187-95.

# Summary

1. Background knowledge on armed conflict and need to engage with conflict-affected states.
2. Describe key health impacts and multiple health pathways.
3. Understand and engage in key issues in the health-sector response, particularly the need for good, locally-driven information.
